Proactive Messaging You Can Count On

With TCN Notification, you can contact thousands of individuals within minutes. This is done by sending messages that are customized with each contact's name and personalized information. TCN Notification is a powerful marketing and communications tool with its abilities allowing you to notify guests about concerts or bookings through call, text, or email. The system allows you to reduce postage costs while increasing the number of contacts reached.

TCN has helped casinos and hotels in the hospitality industry save up to 80 percent by switching from print media.

Interactive features make it easy for potential guests to request more information, reach a customer service representative, or access websites — all through their phone. In the case of a canceled event, TCN Notification allows you to contact guests with alerts and estimated reschedule dates. Proactively reaching guests helps prevent your organization from being overwhelmed with inquiries and maintain satisfaction.
